

Where is the Wind?

Wind power has evolved from a way to grind grain and pump water and has quickly emerged as a competitive source of clean electricity. The Department of Energy has reported that wind power could supply up to 20% of the country's energy, but obviously these windmills won't be spread out evenly over the entire country – some areas are windier than others. This begs the question: "Where is the wind?"

In the United States:

(Installed megawatts for each state as of March 2008)

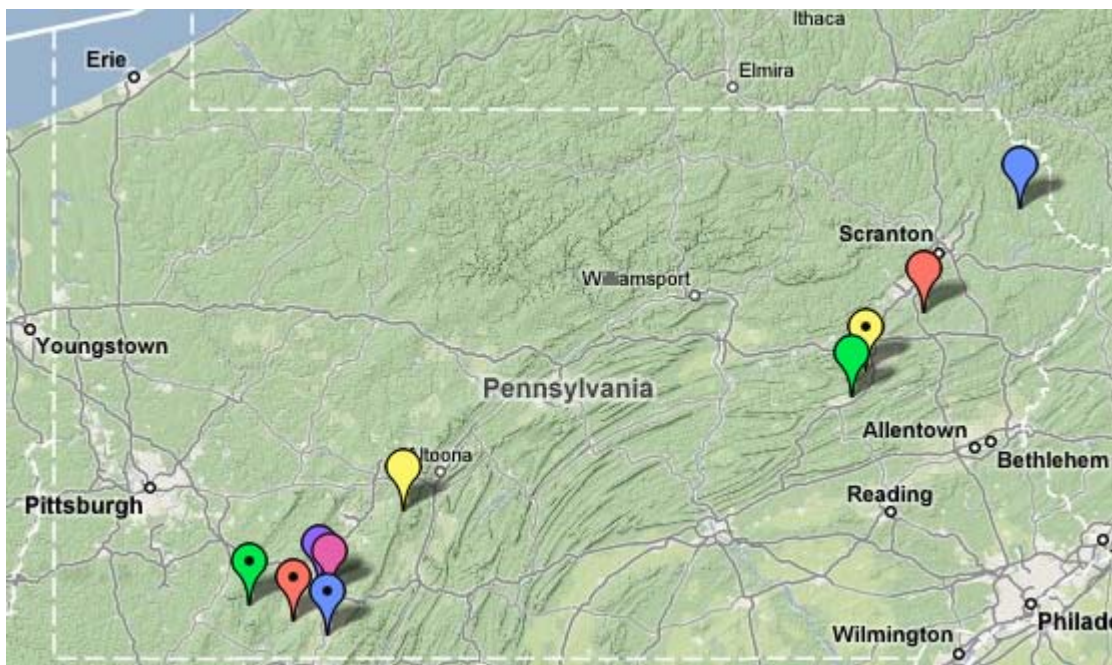

1 MW = 1,000,000 watts

| Total Number of MW | Equivalent to | Percent of America powered by wind |
|--------------------|-----------------|------------------------------------|
| 18,304 | 5,491,200 homes | 4.8 |

In Pennsylvania:

| | Name | Location | Power Capacity (MW) | Owner |
|--|-----------------------------|----------------------------|---------------------|---------------------------|
|  | Casselman Wind Project | Somerset County | 34.5 | Iberdrola Renewables |
|  | Allegheny Ridge Wind Farm | Cambria and Blair Counties | 80 | Babcock & Brown |
|  | Locust Ridge Wind Farm | Schuylkill County | 26 | Noble Environmental Power |
|  | Bear Creek | near Bear Creek | 24 | Babcock & Brown |
|  | Meyersdale | Somerset County | 30 | FPL Energy |
|  | Waymart Wind Farm | Wayne County | 64.5 | FPL Energy |
|  | Mill Run Wind Power Project | Mill Run | 15 | FPL Energy |
|  | Somerset Wind Power Project | Somerset County | 9 | FPL Energy |
|  | Green Mountain Wind Farm | Somerset County | 10.4 | FPL Energy |
|  | Humboldt Industrial Park | Hazleton | 0.13 | Pennsylvania Wind Energy |
| | | | 293.53 MW Total | = roughly 88,000 homes |
